Professional...

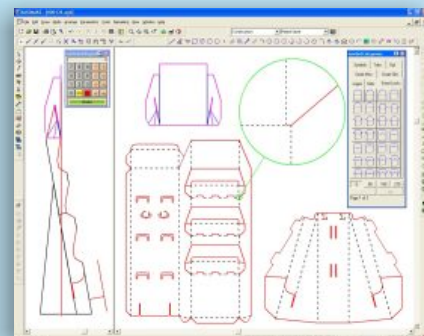

KASEMAKE is widely considered the foremost packaging design system available, used by thousands of designers across the world, in the widest variety of packaging design fields. KASEMAKE has been designed and developed for the packaging industry, to provide designers with the flexibility to realise design solutions quickly and professionally.

With such a wide variety of application, KASEMAKE is continually expanding its user base over many interrelated industries. From pure performance packaging design, in sheet and integrated corrugated plants, to print related construction design, KASEMAKE has been adopted by construction designers, artists, die-makers and finishers.

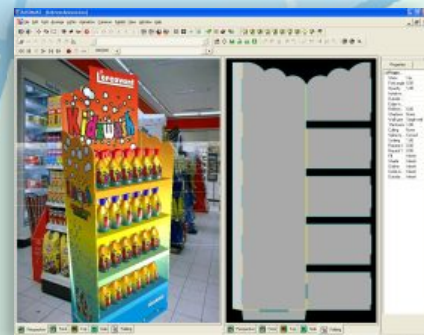

Dedicated developers, AG/CAD ensure that the KASEMAKE product is continually evolving with the needs of the industries they serve. As advances in all fields of application unfold, KASEMAKE products develop in line with the evolution of technology to provide software and hardware products which are designed to utilise the full power of creativity and production.

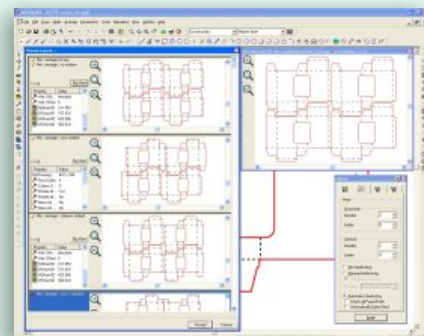

2D & 3D Image mapping

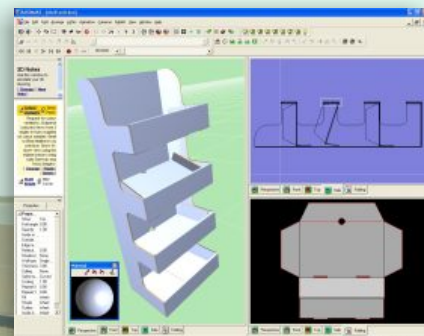

2D Development from draft

Assembly & scene building

Automated layout selector

Easy assembly diagrams

Powerful...

KASEMAKE adheres to a true Windows operating environment and maximises the potential of your PC by utilising the latest in graphic and processing power. KASEMAKE can produce web-ready media in hi-resolution ray-traced output and the most common animated formats including VRML.

Developed with designers by a specialist programming team, the KASEMAKE platform provides a unique drawing experience for novice and seasoned operators alike. The creative drafting resource equips the designer with the widest scope of drawing capabilities, automated assistance and industry specific commands and tools.

Intuitive software capabilities capture the power of creative design into easy to use, variable driven parametrics. Select from an extensive selection of designs, from any of the industry focused parametric libraries, to realise concepts, or to start your creative work.

Positive...

Using KASEMAKE is using design potential to the full. Design professionals and novice users alike can develop their creative skills by exploring the potential of the software. By automating basic functions and making the entire design and manufacturing process strongly integrated, KASEMAKE can release design potential and make design departments more productive.

The KASEMAKE range of products is available to provide a complete solution for design, design automation, sample making and pre-press tool manufacture. For design in paper, card, board, plastics and wood, nothing cuts it like KASEMAKE.
